INSTALLATION STEPS

Before installation, please note that this tap is designed for floor mounting only, and we recommend that it is installed by a fully qualified plumber. It is suitable for use on all boiler systems including pumped, gravity and combination boilers to a maximum pressure of 5 bar - pressure above this may require the fitting of reducer valves. Please also note that failure to flush your plumbing system as part of the installation process will void the product guarantee. In addition, you must fully test the product before tiling and/or plastering, etc as Lusso will not be held responsible for any costs involved in the removal of the tap if you find there is a fault.

- 1 Carefully check the dimension drawing and mark the position for the tap before making an opening in the floor.
- 2 Install the spout valve into the floor and connect the water feed. Please ensure that the valve is screwed tightly into position and there is no movement.
- 3 Fix the valve into place using the provided screws, and open the main valve to check for leakages before sealing the slot.
- 4 Using PTFE tape on the threaded part, connect the spout and tighten into position with the provided allen key. Test the tap for leaks.
